

Hybrid Onion Norstar

DESCRIPTION:	Northeastern long-day type
MATURITY:	Early maturing (90-95 days)
COMPARABLE VARIETIES:	Highlander, Precedent, Uniglobe 100
CULTURAL CHARACTERISTICS:	Suitable for both transplant and direct seeding, Norstar’s early maturity makes it ideal for northern long-day production. Recognized for its high pack outs and uniformity, its globe shape and dark skin give this onion strong market appeal. Norstar is highly tolerant to botrytis and Downy mildew.
MARKETS:	Ideal for fresh and short storage markets
ADAPTABILITY:	New York, Canada, and Northeastern long-day areas

FEATURES

- Excellent uniformity
- Makes size with great shape
- Early maturity
- Firm with dark skin
- Thin necks
- Resistant to botrytis/Downy mildew

BENEFITS

- Great pack outs
- Early market potential
- Excellent market qualities
- Easy cure down
- Reduced disease pressures

Descriptions, illustrations, photos and disease resistance, etc. are based upon the results obtained under favorable conditions and certain races of pathogens/diseases. Identical results are not guaranteed nor implied for all growing conditions. Information is based on average data compiled. Physical characteristics, adaptability and disease tolerance may vary under different conditions. Rev B
