

Hybrid Broccoli Paraiso (TBE-449)

DESCRIPTION: Vigorous upright plant habit, consistently produces heads with smooth dome and fine-medium, dark green beads.

MATURITY: Spring planting: 87 to 100 days; summer planting 85 days

VARIETY CHARACTERISTICS: Uniform for type and maturity, strong field tolerance to hollow stem and brown bead for coastal inland summer harvest. Best to sow in spring and summer for summer to fall harvest at 5 to 6 inch spacing.

ADAPTABILITY: Coastal Western United States, seasonal summer, fall

FEATURES

- Smooth, medium-high dome
- Compact, uniform beads
- Medium sized stalk
- Uniform maturity
- Vigorous, upright plant frame

BENEFITS

- Consumer appeal
- Good harvest weight
- Field tolerance to hollow stem
- Cost effective harvesting
- Reduced head sun exposure/brown bead

Descriptions, illustrations, photos and disease resistance, etc. are based upon the results obtained under favorable conditions and certain races of pathogens/diseases. Identical results are not guaranteed nor implied for all growing conditions. Information is based on average data compiled. Physical characteristics, adaptability and disease tolerance may vary under different conditions. Rev C
